## Experience

### Projects

Project: Concept of AI-Powered Platform for Video Generation from Book Text.

The project aims to develop an AI-powered platform that converts book text into engaging video content. By leveraging neural networks and artificial intelligence, the system will analyze the text and generate relevant visuals.

Key responsibilities:

Collaborated with a team of developers, designers, and other specialists.

Participated in project meetings, providing updates on development progress.

Communicated with educational institutions to gather feedback and optimize the platform.

Organised team tasks and track progress.

Coordinated documentation and user guidelines for the platform.
